Rider Stacker Truck

- Adaptive seating
- Electronic fly-by-wire steering
- Narrow 798mm chassis for Europallet handling
- Speed reduction on cornering
- Combi MOSFET traction and pump control
- AC drive motor
- Automatic release braking
- Regenerative braking
- High lift mast

⁽¹⁾ See Forks table.

⁽²⁾ Applies to one pallet = 1200mm.

⁽³⁾ Value referred to S3 12%.

⁽⁴⁾ See Mast table.

⁽⁵⁾ Stacking aisle widths (lines 4.34.1 & 4.34.2) are based on the VDI standard calculation as shown on illustration. The British Industrial Truck Association recommends the addition of 100mm to the total clearance (dimension a) for extra operating margin at the rear of the truck.

⁽⁶⁾ The battery nominal weight may change according to supplier in the range 366-393kg.

⁽⁷⁾ The battery actual weight is nominal weight +/- 5%.

⁽⁸⁾ With 2 stage mast and b₅ = 570mm the s dimension increases 5mm for first 250mm at toe.

All values are nominal values and they are subject to tolerances. For further information, please contact the manufacturer.

Yale products might be subject to change without notice.

Lift trucks illustrated may feature optional equipment. Values may vary with alternative configurations.

Controls

The electronic fly-by-wire steering requires minimum effort and allows rapid manoeuvring. A spinner knob is standard.

The low effort butterfly button controls direction of travel and speed and the opening and closing of the electromagnetic brake. Horn, lift and lower lever is conveniently located beneath the handgrip for fingertip operation.

Seat

A contoured polyurethane fully vertically adjustable cushion seat permits seated, leaning and standing operation/support to relieve fatigue over extended travel runs.

Operator's compartment

A padded armrest enhances operator comfort. The wide chassis width offers generous leg room.

The floor presence switch enables traction. Releasing the floor presence switch automatically applies the electromagnetic brake.

Chassis

The heavy duty, pressed steel, welded chassis provides protection for the drive train and battery.

The compact chassis width of 798mm facilitates the handling of Europallet in loading/unloading applications and block storage. The low step height of 297mm facilitates easy on/off.

Mast

A variety of mast types, including full free lift 2 and 3 stage masts, is offered. Rollers are permanently lubricated and sealed for maximum service life. Masts are bolt-on type.

A Lexan transparent guard is fitted as standard.

A wire mesh guard is available as an option.

Traction and pump control

A MOSFET high frequency COMBI controller is used to regulate both traction and pump operation.

The controller features automatic braking (reverse current braking) and regenerative braking as well as antirollback start-up on an incline.

Automatic speed reduction when cornering is activated via the controller which also features an in-built diagnostic system and alarm history as well as thermal protection.

Drive unit

The AC drive motor delivers fast travel speeds in the laden/unladen condition, high start-up torque and acceleration as well as efficient running. The use of AC motor technology eliminates forward and reverse contactors. The motor is mounted vertically for easy access, improved ventilation and minimum contamination from floor conditions.

Brake

The electromagnetic brake is electrically released and spring applied. Reverse current braking is applied by inverting the direction of travel. Releasing the butterfly button induces both reverse current braking (adjustable) and regenerative braking.

The brake is opened and closed by activation of the butterfly button with the foot presence switch depressed. The brake is closed by lifting the foot off the foot presence switch.

Instrumentation

A combined hourmeter/battery discharge indicator is featured on the instrument panel. The indicator also displays alarm conditions should they occur. A quick disconnect traction cut-out button is mounted near the armrest.

Overhead guard

A robust overhead guard is bolted to the outer frame of the mast.

Height from 2145mm to 2545mm (depending on mast height).

A Lexan transparent and a wire mesh guard are available as options.

Options

A comprehensive range of options including mast options, fork lengths of 1000mm and 1150mm with 570mm width, side battery removal table and battery change trolley are available.
